WASHINGTON GROWN

BULB GROWING in America is a recent industry. "Washington Grown" Daffodils and Tulips are now conceded to be the finest produced anywhere in the world. This fact is now recognized by leading greenhouse operators and seedsmen.

Some of Europe's leading bulb growers who have visited Northwest bulb fields have commented on the quality of the stocks produced and have pronounced them superior to any produced abroad. Many of the largest plantings are owned by Holland firms who have moved their stock here from Holland.

The excellency of these bulbs is due to a great many factors. Foremost among these is the most perfect climatic conditions for the growing and curing of hardy bulb stocks. The mild wet winters make for perfect growing conditions. The cool summers and proper atmospheric conditions are ideal for the proper curing of the bulbs.

Northwest grown bulbs, when forced, flower much earlier than the foreign product or those produced in less favorable sections. Flowers from these forced bulbs command a premium on the market, due to their earliness, size of flower and superior quality.

The abundance of rich river bottom lands in the Northwest, allows the grower to move his planting to "new" ground often. This is very beneficial to the stocks and insures the production of bulbs free from fungus diseases and other ailments traced to the repeated growing of bulbous stocks on the same soil.

This being America's foremost bulb producing section, the State and Government both maintain a highly trained force of experienced men, who are working constantly on methods of combating disease. The many laboratories and experiment stations are ever on the alert for any new ailment that might attack or impair the quality of the crop.

The educational and scientific work done by the State and Federal departments of agriculture is far ahead of anything accomplished abroad. This is strongly emphasized in comparing foreign and Washington Grown Daffodils. We must destroy a large percentage of new importations in order to have disease free stock for further propagation.

Northwest grown Daffodils lead the world in freedom from disease. This fact has been established many times at Quarantine hearings held in Washington, D. C., by the U. S. Dept. of Agriculture.

GUARANTEE—All bulbs are guaranteed true to name, free from disease or pests, and to arrive in good condition. If they do not give complete satisfaction, advise me at once, and your money will be refunded upon return of the bulbs at my expense.

PREPAID—All prices quoted include delivery by prepaid parcel post or express.

SHIPMENTS are made beginning September 1st and continuing until December 1st. At shipping time orders are filled in rotation as received, earliest orders received are filled first.

SUBSTITUTIONS—When filling orders, if a variety is sold out we will send another as near to the kind ordered as possible and of equal or greater value, unless otherwise instructed. Kindly list on the back of the order blank the varieties you prefer to receive in case some items are sold out.

TERMS OF PAYMENT—Remittances may be made with check or money order. Stamps accepted in payment of small orders. C. O. D. orders accepted if a deposit of 25 per cent accompanies order. KINDLY OMIT ORDERS FOR LESS THAN \$1.00.

QUANTITY PRICES, PREPAID—All bulbs listed herein may be purchased by the 100 for seven times the dozen rate, unless a rate per 100 is quoted.

25 bulbs of a variety at the 100 rate. 6 bulbs of a variety at the dozen rate.

BULBS THAT ARE NOT PRICED IN QUANTITIES OF LESS THAN ONE DOZEN ARE NOT SOLD IN LOTS OF LESS THAN SIX. SIX AT THE DOZEN RATE.

NOVELTY DAFFODILS

Orders for Novelty Daffodils, priced at 75c each or more, should be in my hands before October 1st. When ordering these newer Daffodils at a later date, it would be well to name a substitute, in case your order could not be filled completely.

Order early and plant early for fine flowers. September planted Daffodils produce much finer flowers than later plantings.

EXTRAS WILL BE GIVEN WITH EARLY ORDERS

NARCISSUS – DAFFODILS – JONQUILS

The terms "Narcissus" and "Daffodils" are interchangeable; there exists a tendency to apply the name "Daffodil" to the varieties in which the trumpet or crown is as large or larger than the petals (perianth); while the name "Narcissus" is usually used for the varieties having small cups or crowns. Jonquils are also a type of Narcissus; they usually bear their flowers in clusters and have rush-like foliage. Many of the Jonquil Hybrids have only the single flower and ordinary foliage. The name "Narcissus" is correct for any or all of the different types.

A FEW SUGGESTIONS FOR GROWING DAFFODILS

They will thrive in any well drained garden soil. Prepare the soil deeply, 12 inches or more is best. Plant at least 6 inches deep, extra large bulbs are better planted 7 or 8 inches deep. (Some varieties make larger bulbs than others.) No manure should come in contact with the bulb. If the soil needs fertility, use bone meal at the rate of one-fifth pound to the square yard. This should be thoroughly mixed with the soil under the bulb.

A mulch of straw or leaves will be beneficial in very severe climates. If the mulch is applied after the first freeze, it will prevent thawing and heaving.

DIGGING—Daffodils are best dug and separated every two or three years in the garden; when used for naturalizing in grass or wooded places they may be left undisturbed for years. Bulbs should be dug when the foliage turns yellow and lays flat on the ground, it need not be completely dry. After digging they may be planted at once or spread out to dry in a cool ventilated place and planted anytime until fall. Never dig in the fall, to do so may cause them to skip one year's bloom, should they bloom flowers will be few and small.

INDOOR CULTURE

Pot the bulbs as soon as received in a good loam soil. Some sand and peat moss mixed with the soil will be beneficial, also a small amount of bone flour; about two pounds to a bushel of soil. Bulbs should be potted shallow, tops of bulbs being about level with the top of pot.

Old pots should be washed thoroughly new ones should be soaked. Place a few pieces of charcoal or fragments of broken pots over drainage hole. A little ground peat in the bottom regulates drainage and retains moisture.

Bury the pots outside under six inches of soil or ashes, water well. In 10 to 12 weeks move to the cellar, or any cool dark place for about two weeks. For a succession of bloom bring pots in at weekly intervals, bringing in the earlier varieties first.

Tops should now be several inches above the soil and buds showing. Pots may now be brought inside to a temperature of 50 to 60 degrees. Later when the flower buds are well advanced the temperature may be increased to not over 65. To put where the heat is greater may cause the buds to come "blind". A little liquid manure once a week will hasten the blooming, and improve the quality.

TULIP CULTURE

Best results are to be had by using soil that Tulips have not been grown in for at least two years. Growing more than two years in the same soil will eventually lead to failure. Do not use manure, if the soil needs fertility, mix bone meal with it at the rate of about three handfuls to the square yard. Plant 5 inches deep and at least 6 inches apart. In very severe climates a mulch of peat moss or leaves will be beneficial. This should be applied after the first freeze, and should not be over one inch deep.

Tulips should be dug and reset each year. Dig when the foliage starts to yellow, it need not be completely dry. Store in a cool, dark place, in shallow trays, until fall.

INDOOR CULTURE—Follow directions for Daffodils, making sure that the flower bud can be felt in the green tips before bringing the pots into a temperature of about 60 degrees. If in doubt, wait a little longer.

TRIANDRUS ALBUS. (1) The dainty little "Angel's tears" daffodils are native to Spain and Portugal. A most charming subject for the rock garden, height 7 inches. Flowers are produced in clusters, are creamy white, with globular cup and reflexing perianth. Extremely early. Produces tiny bulbs about the size of peas. COTTAGE TULIPS

(A Few Breeders Are Included)

This class of late or May-flowering tulips comprises a miscellaneous catch-all group of old-fashioned tulips that have been grown for generations in the cottage gardens of England and Europe. They have been much improved in recent years, through selection and hybridization, and are now rivaling the Darwins in popularity. They are tall growing and their petals are more open than the Darwins. In forcing, care must be taken to bring them on slowly. Prices are for No. 1 Top size.

ADVANCE, 32". To obtain a glimpse of what the tulip future holds, plant a few of these. Stems better than the best Darwin; petals longer than the largest Darwin, earlier than the earliest Darwin. Altogether, bolder and better than anything in either Darwin, Breeder or Cottage class. Red, with a "come hither" flush of deepest rose-orange. Each 30c; doz. \$3.00; 100, \$18.00.

ALASKA (Lily Flowered). 24". Clear bright yellow, of elegant form, petals reflex slightly. Doz. \$1.25; 100, \$8.75.

***ALBINO**. 20". The best white Tulip for forcing. Large snow white flowers of fine texture, remaining in splendid condition for a long time, soft yellow anthers. Doz. \$1.75; 100, \$12.00.

ARGO. 20". Deep golden yellow, mottled red, which deepens as the flower ages. Doz. \$1.25; 100, \$8.75.

BARBARA PRATT. 30". Cochineal-carmine with lilac-rose edge; very tall and sturdy. Doz. \$1.60; 100, \$11.00.

BEAUTY OF BATH. 22". Very large oval bloom in pastel coloring of gold, orchid and pink. Doz. \$1.25; 100, \$8.75.

COLCHICUM

AUTUMN BLOOMING COLCHICUMS

Colchicums are charming and interesting plants, hardy, persistent and of easy culture. These great crocus-like flowers carpet the ground in September and October without foliage, the foliage appearing early in the spring, usually lasting until July.

In very warm climates partial shade is preferable, otherwise they succeed best in an open sunny border.

The blossoms seem fragile but are quite tough and last exceedingly well when cut for the house. In the garden the individual flowers last about three days, depending on the weather, being able to stand light frosty mornings better than hot sunny days. Five to 16 blooms come in succession from single bulbs, giving a long flowering period.

In congenial surroundings Colchicums will increase so that every few years replanting is desirable. They should be lifted when the foliage dies down, separated and replanted.

Plant Colchicums as soon as the bulbs can be obtained and are received. Planted in August or September, the bulbs will bloom almost immediately, but are at their best when well established. Deep, well enriched, good loamy soil is preferred with tip of the long bulb placed 1 to 2 inches under the surface. If no ground cover is planted give a light mulch over winter.

The bulbs and foliage are distasteful to animals; mice, moles and rabbits do not bother them.

FLOWERING WITHOUT SOIL or WATER

A most interesting feat of Colchicums is their ability to flower from dry bulbs without soil or water. This makes them valuable novelty gifts for friends and most fascinating for shut-ins to watch develop.

The flat based, clean bulbs may be set on a table, on the window sill or in a container where they will start flowering. As the blooms fade and drop, cut them off and others will follow in quick succession.

In the dark the flowers and tubes come an attractive pure white. On the window sill with plenty of light they have their normal color—less color appearing the farther the bulbs are from the light. The skins of the bulbs are dry and tough which often must be broken to allow the buds to appear.

After flowering in the house, the bulbs should be planted in the garden at once. Bulbs planted outdoors late in the fall do not have as good a chance to recover as those planted out early.

Colchicums are ideal as hospital gifts, after flowering the bulbs may be taken home and planted.

Not available after September 1st. August shipment is best.

WE ARE AT WAR

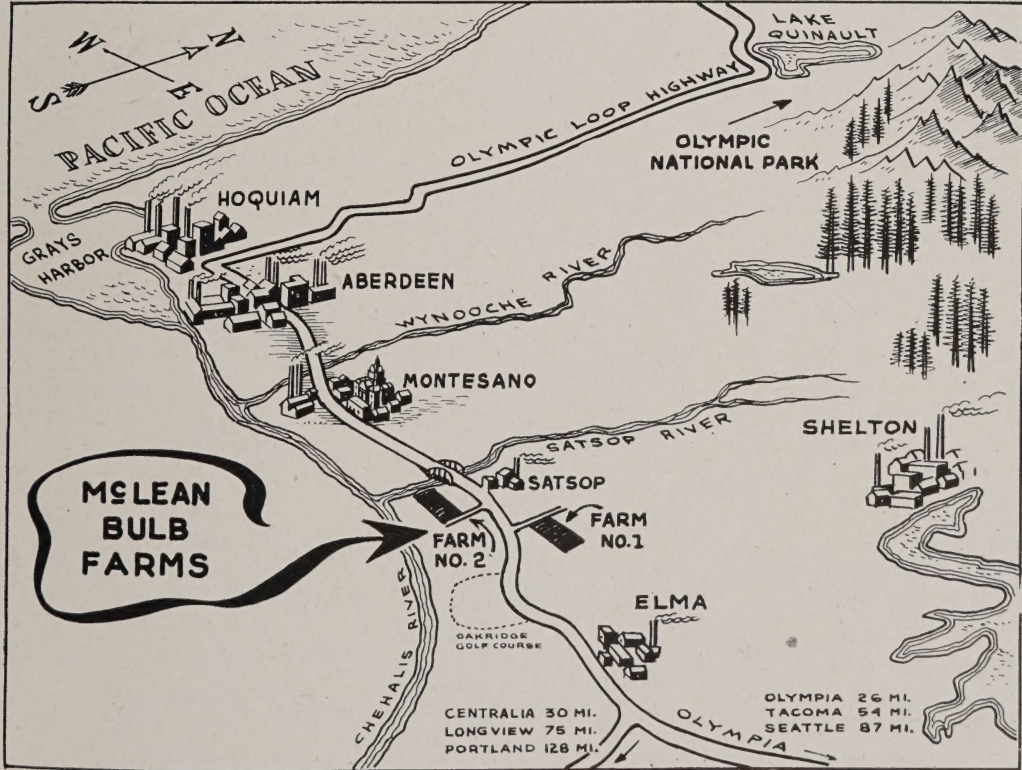

America has turned to gardening, Victory gardens for food, flowers for home morale. Many have taken up gardening as a pastime due to a lack of transportation facilities for other pleasures.

Most bulb growers are also growing food crops, many have entered the armed forces, others have had to quit due to losing their trained help which could not be replaced. Many will not have sufficient labor to dig their entire crops this year. We anticipate a good crop and are still carrying on.

RESULT — The demand for bulbs in 1944 will exceed the supply.

WAR CONDITIONS

Have brought an increased interest in gardening and no other bulb is increasing in favor faster than the newer Daffodils. It is anticipated many items will be on the short side this year.

To avoid disappointment, late customers would do well to name some alternate varieties that may be used for substitutes. Substitutions, when made, are made liberally and to your advantage.

SAVE THIS CATALOGUE

We are not certain when we can issue another. Paper restrictions or other contingencies may prevent publication of a catalogue next year. Most of these varieties will be available in 1945, so save this catalogue for your 1945 selections.
